

BARRIER RAILS

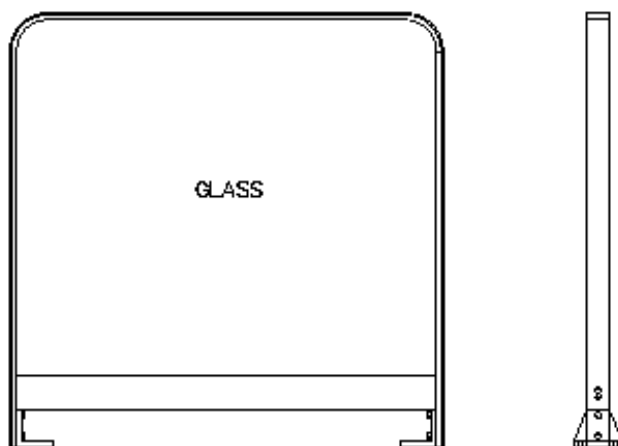

Barrier rails are a fantastic way to create a focus at your entrance and also provide additional safety for your project.

They stop the doors from blowing past 90 degrees and ensure where sensors are used as activation that pedestrians approach from the correct direction. The sensors will only be looking for people approaching face on as the activation sensors “ignore” the area where the doors swing.

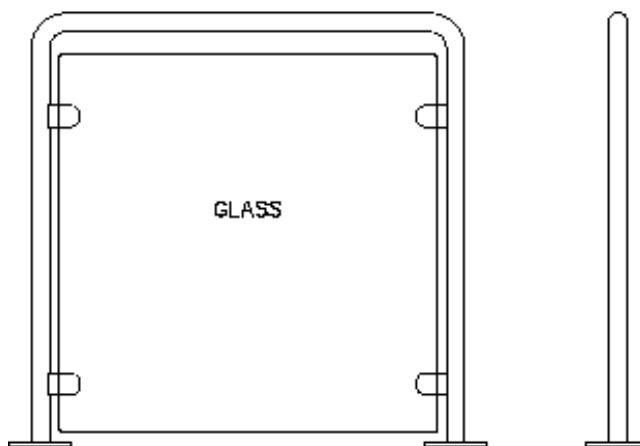

FLOOR TO WALL:

*Aluminium flat bar
6mm safety glass insert
RAL9006 as standard
EN16005 compliant*

FLOOR TO FLOOR:

*Aluminium flat bar
6mm safety glass insert
RAL9006 as standard
EN16005 compliant*

STAINLESS STEEL:

*Grade 316 Stainless steel
Tubular design
6mm safety glass insert
Clamped glass fixings
EN16005 compliant*

OPTIONS:

*Standard finishes as shown
Bespoke finishes available*
