

When you prefer the look of a revolving door but need to provide access for all with limited space in the entry area, the Saturn circular sliding door is for you. The Saturn consists of two sets of curved sliding doors and offers an elegant look with the ease of use offered by sliding doors. Thanks to its curved appearance, the Saturn offers a slightly wider throat opening than normal sliding doors with the same installation width.

The Saturn automatic circular sliding door can be manufactured between 2000mm and 4000mm diameters as standard and has various colour and surface alternatives.

As with all of our products the Saturn is completely compliant with EN16005 norms in terms of safety.
