

POCKET SCREEN BARRIERS

POCKET SCREEN BARRIERS

With more and more entrances needing pocket screens it was a natural step for Prosale to manufacture our own. The standard door sections are restrictive, as they require hinges to attach to an upright. The uprights can be a distance away from where you need the pocket screen to start. This leaves either very wide pocket screens or additional uprights, making the entrance look very cumbersome.

We have designed pocket screens that can start anywhere along the travel of the door and for wider doors we can even split the glass vertically without the need of uprights.

Our pocket screens are near invisible and leave the entrance feeling uncluttered. The screens are constructed from 10mm toughened clear glass with the long edges polished. They are attached at the top through our cover into the track of our operator and at the bottom to a threshold. With locks top and bottom to ensure compliance with the EN16005 the screens are perfect for when safety is paramount.

FINISH

Aluminium is Polyester Powder Coated in a standard RAL to match your project

DIMENSIONS

Height up to 2700mm

Width

One piece: Up to 1200mm

Two piece: up to 2400mm

GLAZING

Single glazed 10mm with polished edges

Heat Soaked Toughened

THRESHOLD

Can be provided as part of package
